

ZALMAG

ZALMAG®
By EUROCLAD www.euroclad.com.au

Zalmag is a unique galvanized coating on steel that consists of 86% zinc, 11% aluminium and 3% magnesium. The coating composition is up to fifteen times more corrosion resistant than traditional hot dipped galvanized steel. Zalmag's new coating composition of zinc, aluminium and magnesium gives the material major attributes.

- 1: Cut edges have a self healing property.
- 2: Patinas to a soft zinc like grey
- 3: Substantial cost savings when compared to zinc
- 4: Excellent corrosion resistance
