

MILLENNIUM TILES FROM EUROCLAD

Euroclad believe that elegance begins with a well engineered product that delivers permanence, beauty and style. Whether you choose the liveliness of our coloured stainless steel or you prefer the soft greys of Zalmag®, a new palette of possibilities is now available which will enhance your design with ELEGANCE THAT ENDURES

Our Stainless Steel Tiles & Panels are available in a full range of high-performance, custom colours.

The process is unique, drawing colour from within the stainless steel itself to create permanent, multi-faceted hues that will never fade, peel or chip.

Visible light is prismatically separated into different wavelengths resulting in different colours within our clear oxide surface. Because the oxide remains clear, it is impervious to UV damage. The colour changes with light conditions, absorbing the mood of the day. Unlike paint, our products dynamically reflect their environment.

The colouring process enhances corrosion resistance of the stainless steel and creates slight colour variations similar to those found in organic products, giving our tiles a natural appearance as well as aesthetic beauty.

We include a 10 year warranty on all of our metal roofing tiles, to be far outlived by the products. Your residential or commercial project will result in an elegant, timeless appeal.

Millennium Tiles are manufactured from premium grade ASTM A 240 stainless steel, using an exclusive and time-proven Zappone Systems™ interlocking design. These tiles feature a unique “shadow cup” which allows a person to walk on the tile, adds texture and provides noise deadening.

Lighter, stronger, smaller in scale than other metal roofing products and available in a range of permanent colours that won't crack, chip, peel or fade, we offer an endless array of design options.

Many famous landmarks testify to the endurance of stainless steel roofing including New York's Chrysler Building (1928) and the St. Louis Arch (1964). Our roof will give years of unsurpassed protection to your creative vision.

Our tiles contain, on average, 75% plus recycled stainless steel and can be recycled if ever removed. In certain cases, they can also be applied over existing asphalt, eliminating the need to send more waste to landfills.

Our stainless steel tiles & panels will outlast every other premium roofing product available with no maintenance required.
